

MAXIM

3-Pin, Ultra-Low-Power SC70/SOT μP Reset Circuits

General Description

The MAX6326/MAX6327/MAX6328/MAX6346/MAX6347/MAX6348 microprocessor (μ P) supervisory circuits monitor the power supplies in μ P and digital systems. These devices provide excellent circuit reliability and low cost by eliminating external components and adjustments when used with 2.5V, 3V, 3.3V, and 5V powered circuits.

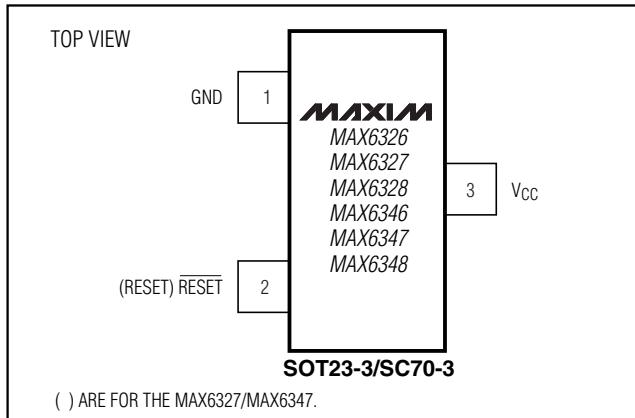

These circuits perform a single function: they assert a reset signal whenever the V_{CC} supply voltage declines below a preset threshold, keeping it asserted for at least 100ms after V_{CC} has risen above the reset threshold. The only difference between the devices is their output. The MAX6326/MAX6346 (push-pull) and MAX6328/MAX6348 (open-drain) have an active-low reset output. The MAX6327/MAX6347 have an active-high push-pull reset output. All of these parts are guaranteed to be in the correct state for V_{CC} down to 1V. The reset comparator is designed to ignore fast transients on V_{CC}. Reset thresholds are factory-trimmable between 2.2V and 4.63V, in approximately 100mV increments. Twenty-one standard versions are available. Contact the factory for availability of nonstandard versions.

Ultra-low supply currents (1 μ A max for the MAX6326/MAX6327/MAX6328) make these parts ideal for use in portable equipment. All six devices are available in space-saving SOT23 and SC70 packages.

Applications

| | |
|---|------------------------------------|
| Computers | Intelligent Instruments |
| Controllers | Automotive |
| Critical μ P and μ C Power Monitoring | Portable/Battery-Powered Equipment |

Pin Configuration

Features

- ◆ Ultra-Low 1 μ A (max) Supply Current (MAX6326/MAX6327/MAX6328)
- ◆ Precision Monitoring of 2.5V, 3V, 3.3V, and 5V Power-Supply Voltages
- ◆ Reset Thresholds Available from 2.2V to 4.63V
- ◆ Fully Specified Over Temperature
- ◆ 100ms (min) Power-On Reset Pulse Width
- ◆ Low Cost
- ◆ Available in Three Versions: Push-Pull RESET, Push-Pull RESET, and Open-Drain RESET
- ◆ Power-Supply Transient Immunity
- ◆ No External Components
- ◆ 3-Pin SC70/SOT23 Packages
- ◆ Pin Compatible with MAX803/MAX809/MAX810

Ordering Information

| PART [†] | TEMP. RANGE | PIN-PACKAGE |
|---------------------|----------------|-------------|
| MAX6326XR_-T | -40°C to +85°C | 3 SC70-3 |
| MAX6326UR_-T | -40°C to +85°C | 3 SOT23-3 |
| MAX6327XR_-T | -40°C to +85°C | 3 SC70-3 |
| MAX6327UR_-T | -40°C to +85°C | 3 SOT23-3 |
| MAX6328XR_-T | -40°C to +85°C | 3 SC70-3 |
| MAX6328UR_-T | -40°C to +85°C | 3 SOT23-3 |
| MAX6346XR_-T | -40°C to +85°C | 3 SC70-3 |
| MAX6346UR_-T | -40°C to +85°C | 3 SOT23-3 |
| MAX6347XR_-T | -40°C to +85°C | 3 SC70-3 |
| MAX6347UR_-T | -40°C to +85°C | 3 SOT23-3 |
| MAX6348XR_-T | -40°C to +85°C | 3 SC70-3 |
| MAX6348UR_-T | -40°C to +85°C | 3 SOT23-3 |

[†]The MAX6326/MAX6327/MAX6328/MAX6346/MAX6347/MAX6348 are available in factory-set V_{CC} reset thresholds from 2.2V to 4.63V, in approximately 0.1V increments. Choose the desired reset-threshold suffix from Table 1 and insert it in the blank spaces following "R." There are 21 standard versions with a required order increment of 2500 pieces. Sample stock is generally held on the standard versions only (see the Selector Guide). Required order increment is 10,000 pieces for nonstandard versions (Table 2). Contact factory for availability. All devices available in tape-and-reel only.

Selector Guide appears at end of data sheet.

MAX6326/MAX6327/MAX6328/MAX6346/MAX6347/MAX6348

3-Pin, Ultra-Low-Power SC70/SOT μ P Reset Circuits

ABSOLUTE MAXIMUM RATINGS

Terminal Voltage (with respect to GND)

| | |
|----------------------------------|-----------------------------------|
| V _{CC} | -0.3V to +6V |
| RESET, RESET (push-pull) | -0.3V to (V _{CC} + 0.3V) |
| RESET (open drain) | -0.3V to +6V |
| Input Current (V _{CC}) | 20mA |
| Output Current (RESET, RESET) | 20mA |
| Rate of Rise (V _{CC}) | 100V/ μ s |

Continuous Power Dissipation (T_A = +70°C)

| | |
|---|-----------------|
| 3-Pin SC70 (derate 2.7mW/ $^{\circ}$ C above +70°C) | 174mW |
| 3-Pin SOT23 (derate 4mW/ $^{\circ}$ C above +70°C) | 320mW |
| Operating Temperature Range | -40°C to +85°C |
| Storage Temperature Range | -65°C to +150°C |
| Lead Temperature (soldering, 10s) | +300°C |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{CC} = full range, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at T_A = +25°C and V_{CC} = 3V.) (Note 1)

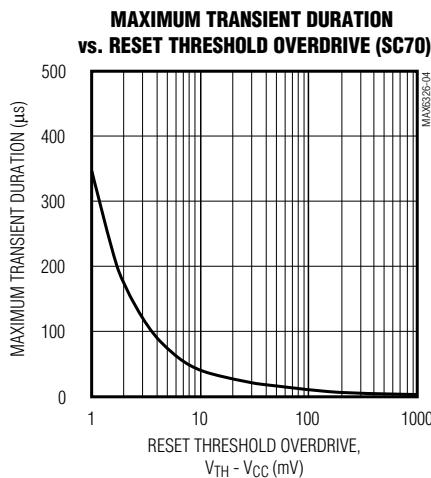

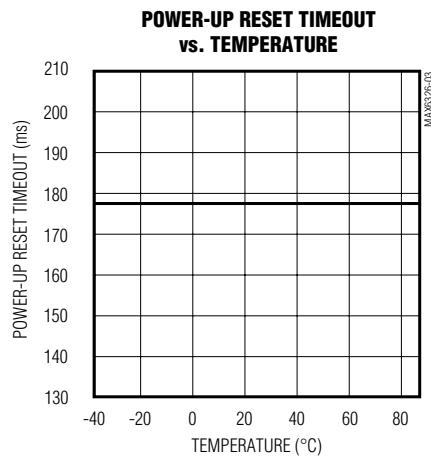

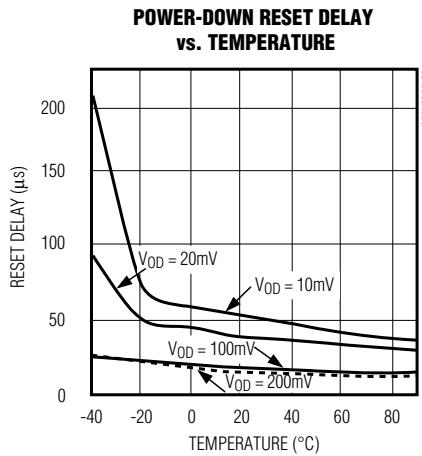

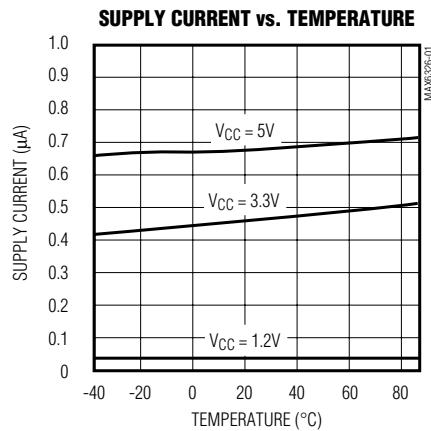

| PARAMETER | SYMBOL | CONDITIONS | MIN | TYP | MAX | UNITS |
|---|----------------------------|--|---------------------------------|------------------------|-----------------|------------------------|
| V _{CC} Range | | T _A = 0°C to +70°C | 1.0 | 5.5 | | V |
| | | T _A = -40°C to +85°C | 1.2 | 5.5 | | |
| Supply Current | I _{CC} | MAX632_ only, V _{CC} = 3.0V for V _{TH} ≤ 2.93V, V _{CC} = 3.2V for V _{TH} > 2.93V, no load | | 0.5 | 1.0 | μ A |
| | | V _{CC} = 5.5V, no load | | 1.0 | 1.75 | |

| RESET Threshold Hysteresis | | MAX6326/MAX6327/MAX6328 | | 6.3 | | mV |
| | | MAX6346/MAX6347/MAX6348 | | 9.5 | | |
| Open-Drain RESET Output Leakage Current | | | | | 0.1 | μ A |

Note 1: Overtemperature limits are guaranteed by design and not production tested.

3-Pin, Ultra-Low-Power SC70/SOT µP Reset Circuits

Typical Operating Characteristics

($T_A = +25^\circ\text{C}$, unless otherwise noted.)

Pin Description

| PIN | | NAME | FUNCTION |
|------------------------------------|--------------------|-----------------|--|
| MAX6326/MAX6346 MAX6328/MAX6348 | MAX6327 MAX6347 | | |
| 1 | 1 | GND | Ground |
| 2 | — | RESET | Active-Low Reset Output. <u>RESET</u> remains low while V _{CC} is below the reset threshold and for at least 100ms after V _{CC} rises above the reset threshold. <u>RESET</u> is open-drain on the MAX6328/MAX6348 and push-pull on the MAX6326/MAX6346. |
| — | 2 | RESET | Active-High Reset Output. RESET remains high while V _{CC} is below the reset threshold and for at least 100ms after V _{CC} rises above the reset threshold. |
| 3 | 3 | V _{CC} | Supply Voltage |

3-Pin, Ultra-Low-Power SC70/SOT µP Reset Circuits

Applications Information

Interfacing to µPs with Bidirectional Reset Pins

Since the RESET output on the MAX6328/MAX6348 is open drain, these devices interface easily with microprocessors (µPs) that have bidirectional reset pins, such as the Motorola 68HC11. Connecting the µP supervisor's RESET output directly to the microcontroller's (µC's) RESET pin with a single pull-up resistor allows either device to assert reset (Figure 1).

Negative-Going Vcc Transients

In addition to issuing a reset to the µP during power-up, power-down, and brownout conditions, these devices are relatively immune to short-duration, negative-going VCC transients (glitches).

The *Typical Operating Characteristics* show the Maximum Transient Duration vs. Reset Threshold Overdrive graph, for which reset pulses are not generated. The graph shows the maximum pulse width that a negative-going VCC transient may typically have when issuing a reset signal. As the amplitude of the transient increases, the maximum allowable pulse width decreases.

Table 1. Factory-Trimmed Reset Thresholds[‡]

| PART | SUFFIX | RESET THRESHOLD VOLTAGE, V _{TH} (V) | | | | |
|-----------|--------|--|-------|-------|---------------------------------|-------|
| | | T _A = +25°C | | | T _A = -40°C to +85°C | |
| | | MIN | TYP | MAX | MIN | MAX |
