## 32-Channel Serial-to-Parallel Converter With Open Drain Outputs

### Features

- 100 mA Minimum Sink Current
- 8 MHz Shift Register Speed
- Polarity and Blanking Inputs
- CMOS-compatible Inputs
- Forward and Reverse Shifting Options
- Diode to V<sub>PP</sub> allows Efficient Power Recovery

### Applications

- Inkjet and Electrostatic Print Heads
- AC-electroluminescent Displays
- Microelectromechanical Systems Applications

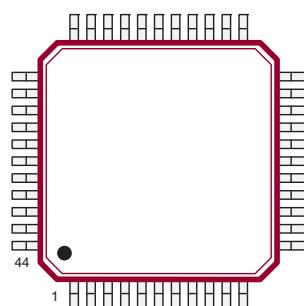

### General Description

The HV5622 is a low-voltage serial-to-high-voltage parallel converter with open drain outputs. This device has been designed as a driver for AC-electroluminescent displays. It can also be used in any application requiring multiple-output high-voltage current-sinking capabilities such as driving inkjet and electrostatic print heads, plasma panels, vacuum fluorescent and large matrix LCD displays.

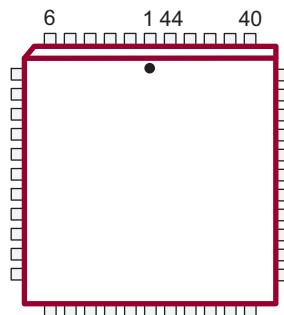

The device consists of a 32-bit Shift register, 32 latches and control logic to perform the polarity select and blanking of the outputs. Data is shifted through the Shift register on the high-to-low transition of the clock. The HV5622 shifts in a clockwise direction when viewed from the top of the package. A data output buffer is provided for cascading devices. This output reflects the current status of the last bit of the Shift register. The operation of the Shift register is not affected by the latch enable (LE), blanking (BL) and polarity (POL) inputs. Transfer of data from the Shift register to the latch occurs when the LE input is high. The data in the latch is stored when LE is low.

44-lead PLCC ( <a href="#">Note 3</a> )	.....	1200 mW

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

**Note 1:** All voltages are referenced to  $V_{SS}$ .

**2:** Duty cycle is limited by the total power dissipated in the package.

**3:** For operations above 25°C ambient, derate linearly to the maximum operating temperature at 20 mW/°C.

## NOTES:

## APPENDIX A: REVISION HISTORY

### Revision A (October 2017)

- Converted Supertex Doc # DSFP-HV5622 to Microchip DS20005854A
- Removed “Processed with HVCMOS® Technology” in the Features section
- Changed the package marking format
- Removed the 44-lead PQFP PG M919 and 44-lead PLCC PJ M903 media types
- Made minor changes throughout the document

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
